                                                                                                                                                                                                                                                        The present invention relates to the isolation of human tumour-associated antigenic target (TAT) polynucleotide and polypeptide sequences. Also disclosed is an antibody that binds to a TAT polypeptide. The antibody is a monoclonal antibody an antibody fragment, a chimeric antibody or a humanised antibody. It is conjugated to a growth inhibitory agent. It is produced in bacteria or in CHO cells and induces death of a cell to which it binds. The antibody is useful for preparing a composition for diagnosing or treating tumours and cancer. The present sequence represents a human TAT polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Desauvage FJ, r

RESULT 17
AAE20511
The present sequence is novel human protein (NHP), ion channel protein. CC MHP share structural similarity with mammalian sodium channel proteins. CC particularly voltage-gated sodium channel proteins. NHP oligonuclectides CC particularly voltage-gated sodium channel proteins. NHP oligonuclectides CC are useful as hybridisation probes for screening libraries and assessing gene expression patterns. Sequences derived from regions adjacent to the CC intron/exon boundaries of MHP gene can be used to design primers for use in the intronice in the can be used in diagnostics and pharmacogenomics. NHP mucleotide sequences are useful for drug screening effective in the CC treatment of symptomatic or phenotypic manifestations of perturbing the cormal function of NHP in the body, and nucleotide constructs encoding CC NHP products are useful to genetically engineer host cells to express NHP products in vivo. These genetically engineered cells function as CC bioreactors in the body delivering a continuous supply of a NHP, a NHP CC peptide, or a NHP fusion protein to the body. Nucleotide construct CC expression and to product genetically engineered host cells to express CC NHP products are also useful in gene therapy for modulating NHP conducts are also useful in gene therapy for modulating NHP conducts in vivo. NHP nucleotide sequences may also be used as part of ribozyme and/or triple helix sequences that are useful for NHP gene CC readents in diagnostic assays, for identifying other cellular gene CC compounds that are useful in the treatment of mental, biological or compounds that are useful in the treatment of mental, biological or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel polynucleotides encoding human sodium channel proteins, particularly voltage-gated sodium channel proteins useful for drug screening, diagnosis and in gene therapy of biological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; Page 37-41; 83pp; English.

CC RHP share structural similarity with mammalian sodium channel protein. CC NHP share structural similarity with mammalian sodium channel proteins. CC particularly voltage-gated sodium channel proteins. NHP oligonuclectides CC are useful as hybridisation probes for screening libraries and assessing CC gene expression patterns. Sequences derived from regions adjacent to the cC intron/exon boundaries of NHP gene can be used to design primers for use CC in amplification assays to detect mutations within the exons, splice cC sites, introns that can be used in diagnostics and pharmacogenomics. NHP creatment of symptomatic or phenotypic manifestations of perturbing the cC normal function of NHP in the body, and nucleotide constructs encoding CC products in vivo. These genetically engineer host cells to express NHP products are useful to genetically engineered cells function as CC peptide, or a NHP fusion protein to the body. Nucleotide construct expression and to produce genetically engineered host cells to express CC peptide, or a NHP fusion protein to the body. Nucleotide construct expression and to produce genetically engineered host cells to express CC peptide, or a NHP fusion protein to the body. Nucleotide construct expression and to produce genetically engineered host cells to express CC of ribozyme and/or triple helix sequences may also be used as part regulation. The NHP polypeptides are useful for generating antibodies, as products related to NHP and as reagents in assays for screening for medical discorders and discorders and discorders in the treatment of mental, biological or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel polynucleotides encoding human sodium channel proteins, particularly voltage-gated sodium channel proteins useful for drug screening, diagnosis and in gene therapy of biological disorders.

(I), optionally incorporated into a cell, is used to screen for specific modulators, potentially useful as anticonvulsant, antiepileptic, neuroprotective, analgesic and/or anesthetic agents, e.g. for treating severe mycolonic motor endplate diseases, hypertension, congestive heart failure and muscular dystrophy also to treat cancer (SCNIA is expressed in prostatic and metastatic cancer cell lines). These activities can also be provided modulators, also antibodies directed against (I), are used to detect sodium channel polypeptides. The present sequence represents a human SCNIA splice variant 84P:SCNIADELD654-681
                                                                                                                                                                                                                          Sequence 1981 AA;

In Leury Boom boundaries of Mar your control of the exong, splice in amplification assays to detect mutations within the exong, splice constructs, introns that can be used in diagnostics and pharmacogenomics. NHP conclectide sequences are useful for drug screening effective in the cream of treatment of symptomatic or phenotypic manifestations of perturbing the commal function of NHP in the body, and nucleotide constructs encoding the products are useful to genetically engineer host cells to express NHP compounds in the body delivering a continuous supply of a NHP, a NHP coloreactors in the body delivering a continuous supply of a NHP, a NHP coloreactors in the body delivering a continuous supply of a NHP, a NHP coloreactors in the body delivering a continuous supply of a NHP, a NHP coloride, or a NHP fusion protein to the body. Nucleotide construct concoding NHP products are also useful in gene therapy for modulating NHP corporates in vivo. NHP nucleotide sequences may also be used as part of ribozyme and/or triple helix sequences that are useful for NHP gene creagants in diagnostic assays, for identifying other cellular gene compounds that are useful in the treatment of mental, biological or and diagnostic assays, for identifying other cellular gene compounds that are useful in the treatment of mental, biological or

NHP share structural similarity with mammalian sodium channel proteins particularly voltage-gated sodium channel proteins. NHP oligonucleotides are useful as hybridisation probes for screening libraries and assessing gene expression patterns. Sequences derived from regions adjacent to the intron/exon boundaries of NHP gene can be used to design primers for use
                                                                                   Sequence 1998 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; Page 30-34; 83pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel polynucleotides encoding human sodium channel proteins, particularly voltage-gated sodium channel proteins useful for drug screening, diagnosis and in gene therapy of biological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        16-AUG-2000; 2000US-0225989P

                                                                                                                                                  The invention relates to a recombinantly expressed and isolated human SCNIA (sodium channel type I alpha-subunit) (I). (I), optionally incorporated into a cell, is used to screen for specific modulators, potentially useful as anticonvulsant, antiepileptic, neuroprotective, analgesic and/or anesthetic agents, e.g. for treating severe myoclonic epilepsy of infancy, stroke, cardiac arrest, hyperkalemic paralysis, motor endplate diseases, hypertension, congestive heart failure and muscular dystrophy also to treat cancer (SCNIA is expressed in prostatic and metastatic cancer cell lines). These activities can also be provided by gene therapy vectors that express (I) or the modulators. The modulators, also antibodies directed against (I), are used to detect sodium channel polypepides. The present sequence represents a human SCNIA splice variant 33P:SCNIADELp671-681 encoding cDNA
                                                                                                                          Sequence 1998 AA;
                                                                                                                                                                                                                                                                                                                                                                                                         Recombinantly expressed sodium channel type 1 alpha subunit, useful in screening for modulators, for treating e.g. epilepsy.
                                                                                                                                                                                                                                                                                                                                                                            Disclosure; Page 148-156; 176pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SCNIA; sodium channel type 1 alpha-subunit; anticonvulsant; analgesic; neuroprotective; anesthetic; cytostatic; cerebroprotective; cardiant; hypotensive; gene therapy; human; splice variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2003-712725/67.

                                                                                                                                                                                                                         ABB06027 standard;
                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes human sodium channels SCNIA and SCNIA. The present sequence represents the human sodium channel SCNIA SCNIA and SCNIA have been located to the human chromosome 2 long arm, positions 2q24 and 2q24-31 respectively. The sodium channel proteins are useful in studying the physiological mechanism in which excitant cells participate and cause human diseases, and in developing remedies for e.g. familial hypercalcaemic periodic paralysis of extremities and motor endplate
                                                                                                                                                                                                                                                                                                                                                                              Sequence 1999 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human sodium channels SCN1A and SCN3A and encoded genes, useful in studying physiological mechanism in which excitant cells participate causes of diseases and developing drugs for motor endplate disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; Page 40-49; 88pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes human sodium channels SCNIA and SCNIA. The present sequence represents the human sodium channel SCNIA. SCNIA and SCNIA have been located to the human chromosome 2 long arm, positions 2924 and 2924-31 respectively. The sodium channel proteins are useful in studying the physiological mechanism in which excitant cells participate and cause human diseases, and in developing remedies for e.g. familial hypercalcaemic periodic paralysis of extremities and motor endplate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2000 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 2; Page 72-81; 88pp; Japanese.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human sodium channels SCN1A and SCN3A and encoded genes, useful in studying physiological mechanism in which excitant cells participate and causes of diseases and developing drugs for motor endplate disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                           individual's predisposition to epilepsy and/or development of epilepsy, as well as predicting the individual's response to medication. The method comprises determining the genotype of at least one gene selected from SCN1A, SCN2A or SCN3A, or a DNA variant, equivalent, or mutation which shows a linkage disequilibrium. SCN1A, SCN2A and SCN3A are all sodium channel genes located on chromosome 2. The idiopathic generalised epilepsy (IGE) gene is more specifically localised on chromosome 2923-931. Compounds identified as modulators of the biological activity of SCN1A, SCN2A or SCN3A proteins or genes, are useful for treating epilepsy or other neurological disorders. They have anticonvulsant and neuroprotective activities. AAH55763 to AH55164 and AAB99674 to AAB99679
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Navl.3, where the antisense compound specifically hybridizes with and inhibits the expression of Navl.3. The compound and composition are useful for treating a disease or condition associated with Navl.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Determining a predisposition to epilepsy and/or development of epilepsy comprises determining the genotype of SCN1A, SCN2A and/or SCN3A, or a DNA variant, equivalent, or mutation which shows a linkage disequilibrium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method (M1) of determining an

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score

C; Comment: This membrane glycoprotein mediates the voltage-dependent sodium-ion permeabigs the membrane, the protein forms a sodium-selective channel through which sodium ions C; Comment: This sequence contains four highly homologous internal repeats (excluding research repeat has a similar overall structure containing six subregions located in identifias a net positive charge (S4), and one is neutral (S2).
C; Comment: The four repeating units are thought to be oriented pseudosymmetrically acrose. The presence of four homologous structures within this molecule is consistent with the C; Comment: Available data suggest that activation and inactivation gates are located nea 955 might, in conjunction with the positively charged residues of S4, act as a voltage s C; Superfamily: sodium channel moresin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          C;Date: 28-May-1986 #sequence_revision 28-May-1986 #text_change 09-Jul-2004 (;Accession: A03178; I50536 R;Noda, M.; Shimizu, S.; Tanabe, T.; Takai, T.; Kayano, T.; Ikeda, T.; Takai da, H.; Miyata, T.; Numa, S.

may pass in accordance with their electrochemical gradient.

SUBUNIT: The sodium channel consists of a large polypeptide and a smaller ones. This sequence represents a large polypeptide.

SUBCELLULAR LOCATION: Integral membrane protein.

ALTERNATIVE PRODUCTS:

Event-Alternative splicing; Named isoforms=4;

Event-Alternative splicing and 6N only differ by a single residue;
                                                                                                                                                                                                                                                          Name=3; Synonyms=6N-12+12b;
IGDId=QNNY46-3; Sequence=VSP_001033;
Name=4; Synonyms=6N-12;
IsoId=Q9NY46-4; Sequence=VSP_001033, VSP_001034;
DOMAIN: The sequence contains 4 internal repeats, each with 5 hydrophobic segments (S1,52,53,55,56) and one positively charged segment (S4). Segments S4 are probably the voltage-sensors and archaracterized by a series of positively charged amino acids at every third position.

SIMILARITY: Belongs to the sodium channel family.

SIMILARITY: Contains 1 IQ domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Comment=Exons 6A and 6N only differ Name=1; Synonyms=6A-12+12b;

RA Han J., Lu C.-M., Brown G.B., Rado T.A.;
RT "Direct amplification of a single dissected chromosomal segment by RT chromosome 2q22-q23.";
RT polymerase chain reaction: a human brain sodium channel gene is on Proce Natl. Acad. Sci. U.S.A. 88:335-339(1991).
CC -: FUNCTION: Mediates the voltage-dependent sodium ion permeability of excitable membranes. Assuming opened or closed conformations in CC response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na(+) ions CC may pass in accordance with their electrochemical gradient.
CC -: SUBUNIT: The sodium channel consists of a large polypeptide and 2-CC smaller local integral membrane protein.
CC 3 smaller ones. This sequence represents a large polypeptide.
CC -: SUBCELLUIAR LOCATION: Integral membrane protein.

RA Takahashi H., Numa S.;
RT "Existence of distinct sodium channel messenger RNAs in rat brain.";
CC -i-FUNCTION: Mediates the voltage-dependent sodium ion permeability
CC of excitable membranes. Assuming opened or closed conformations in
CC response to the voltage difference across the membrane, the
CC may pass in accordance with their electrochemical gradient.
CC may pass in accordance with their electrochemical gradient.
CC subcutility. The sodium channel consists of a large polypeptide and 2-
1-SUBLNIT: The sequence contains 4 internal repeats, each with 5
CC subciliurak LOCATION: Integral membrane protein.
CC hydrophobic segments (S1.S2.S3,S5,S6) and one positively charged
CC characterized by a series of positively charged amino acids at
CC -i-SUMILARITY: Contains 1 IQ domain.
CC -i-SIMILARITY: Contains 1 IQ domain.

-|- FUNCTION: Mediates the voltage-dependent sodium ion permeabi of excitable membranes. Assuming opened or closed conformative personnes to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na(+) may pass in accordance with their electrochemical gradient.
-|- SUBUNIT: The sodium channel consists of a large polypeptide a smaller ones. This sequence represents a large polypeptide (-) SUBCELLULAR LOCATION: Integral membrane protein.

     is observed.

DISEASE: Defects in SCNIA are a cause of severe myoclonic epile in infancy (SMEI) [MIM:607208], a severe form of generalized epilepsy with febrile seizures. SMEI is a rare disorder characterized by normal development before onset, seizures beginning in the first year of life in the form of generalized unilateral febrile clonic seizures, secondary appearance of unilateral febrile clonic seizures, secondary appearance of the services are considered to the first year.
                                                                                                                                    every third position.

DISEASE: Defects in SCNIA are the cause of generalized e with febrile seizures plus type 2 (GBFS+2) [MIM:604233]. autosomal dominant disorder is characterized by febrile in children and afebrile seizures in adults. Penetrance incomplete and a large intrafamilial variability of the
